

# ImagINK™ is more than just digital imaging on glass.

## UV STABLE

ImagINK printed glass is produced using specialised ceramic inks that are 100% fade resistant to harmful UV rays.

## BUILT-IN SAFETY

All ImagINK glass is toughened as part of the printing process.

## SCRATCH RESISTANT

Ceramic inks permanently fuse to the glass when fired, creating a scratch-proof surface.

## NO INTERLAYER

Printing directly onto glass eliminates the need for costly laminating. The smooth nonporous finish of the print means maintenance is a piece of cake.
